

ECOMETRICS REPORT HUNTER DOUGLAS HOSPITALITY WITH AIRDYE® PRODUCTION

window product

HunterDouglasHospitality

PROJECT DESCRIPTION

AirDye® replacement for window product.
Comparison with traditionally dyed and printed material, based on 1 unit.

ANALYSIS RESULTS

ITEM	CONVENTIONAL	AIRDYE®	SAVINGS	% SAVINGS
Window Product				
Water (Gallons)	141	16	125	88.7%
Energy (MJ)	831	83	748	90.0%
GHG (kg CO ₂ equiv.)	32	5	27	84.4%

AIRDYE® VS. WETDYE: WATER CONSUMPTION, ENERGY, AND GLOBAL WARMING COMPARISONS

Water (Gallons)

Energy (MJ)

Greenhouse Gas
(kg CO₂ equivalent emissions)

ANALYSIS NOTES

The above data is calculated from Life Cycle Assessment of the AirDye® process. This data is verified through third party review of certified research. Data is available upon request. Industry averages for conventional process impact is derived from published data by government, industry and academic research. Additional information is available at www.airdye.com.

AirDye® technology manages the application of color to textiles without the use of water. AirDye® is today's sustainable alternative to traditional dyeing and decorating processes.

The benefits of using AirDye® technology are:

- does not pollute water, by using air instead of water to convey dye, no hazardous waste is emitted and no water is wasted.
- greatly reduces energy requirements, therefore lowering costs and satisfying the strictest standards of global responsibility.
- does not use boilers, screen printing machines, drying ovens, or cleaning and scouring chemicals, thereby eliminating major sources of pollution.
- communicates to the consumer the environmental benefits of products without sacrificing style or costs.

Note: The following assumptions have been made for this analysis. Average fabric weight of 8.3 oz/linear yard. Fabric width is approximately 62". Yardage needed: 11 yards.
